As the most comprehensive health university in the region, The University of Texas Health Science Center at Houston (UTHealth) trains the next generations of health care professionals to meet the needs of the Houston community and beyond, and to crack the codes to the most pressing health care challenges of our time.

Home to schools of medicine, nursing, dentistry, public health, biomedical sciences and biomedical informatics, UTHealth is located in the heart of the renowned Texas Medical Center, which includes our clinical partners Memorial Hermann-Texas Medical Center, Children's Memorial Hermann Hospital, The

University of Texas Harris County Psychiatric Center, and Harris Health System's Lyndon B. Johnson Hospital. UTHealth's three faculty practice plans – UT Physicians, UT Health Services and UT Dentists – provide quality, compassionate care to the community through more than 1,200 providers in nearly 90 specialties in clinical settings spread across the Greater Houston area.

Our faculty members, residents, fellows and students work from the laboratory to the bedside on breakthrough discoveries that will take the diagnosis, treatment and prevention of disease and injury to levels only dreamed of a decade ago.

We are leaders in the nation in novel approaches to education and curricula that become the gold standards in training in medical informatics, nursing education, trauma care, epidemiology, healthy aging, genetics, robotic surgery, addiction, diabetes, childhood obesity, environmental health plus many others. We strive for a future free of chronic diseases, meanwhile providing exceptional, compassionate care to our patients at every age and stage of life. We develop innovative treatments that give patients a stronger chance of survival after serious injury. We are the first in the nation to treat stroke patients in their driveway through the creation of the first mobile stroke ambulance. We address health care shortages by educating more health care professionals than any other health-related institution in Texas. ■
